

UNIVERSAL SUSTAIN PEDAL

The Morley product line of Accutronics, Inc., proudly announces the introduction of our Universal Sustain Pedal (USP). The USP is a momentary-contact switch mounted in a sleek, low-profile pedal enclosure. The USP is designed for use with the external "sustain" connection found on most electronic keyboards and rack-mount MIDI voice modules. The Universal Sustain Pedal is also suitable for any application requiring a foot-actuated momentary switch, such as sequencers and drum machines.

The key to the versatility of the USP lies in making both normally-open and normally-closed switch contacts available through two standard 1/4 inch jacks mounted on the rear of the pedal; eliminating the problem of having a sustain pedal that is not compatible to all equipment because of the switch contacts. A standard guitar cable will connect the USP to the device being controlled. This gives the USP a valuable benefit over footswitches with permanently-attached cords: if a connection fails, simply replace the cable, not the pedal. The Universal Sustain Pedal matches cost-effective versatility with the same rugged construction that has long been synonymous with the Morley name.
