

CONGRATULATIONS,

OPERATING INSTRUCTIONS

You now own the finest pedal ever made. A Morley. The VOL is designed for years of trouble-free operation. To insure your satisfaction, please take a bit of time to read this book to acquaint yourself with some of the features that may be new to you. Above all, we hope you enjoy your new Morley VOL as much as we enjoyed building it for you.

GENERAL INFORMATION

The Morley VOL is A.C. powered and photo-electric cell driven. There is no rack and pinion gear nor is there a pot coupled to the pedal, as you might find in most other pedals. The indicator light is the driving source for the VOL and must be ON for the unit to operate. Replace a damaged lamp using a factory replacement or a #387 bulb as a substitute. A #327 may also be used in an emergency.

1. Plug the VOL into an appropriate A.C. source.
2. Connect the instrument to the VOL by plugging one end of a shielded cable to the instrument and plug the other end into the input labeled "INSTRUMENT" on the VOLUME PEDAL.
3. Connect the amp to the VOL by plugging one of the ends of a shielded cord into the input of the amp, and the other end into the remaining VOL jack labeled "AMPLIFIER".
4. Set the controls on your instrument, and your amplifier, to their usual settings.

USING THE VOLUME PEDAL

1. In the UP pedal position (toe up, heel down), there should be no sound. As the rocker pedal is pressed down, the sound level increases in relation to the angle of the pedal. The level increases as you press downward on the pedal.
