

THANK YOU!

For purchasing a Morley® pedal. You now own the best 4 way Multi-Channel Volume pedal made!

Please take a few minutes to familiarize yourself with the features of your new pedal. With common sense handling, it should last for years. We know you will appreciate the rugged construction of your Morley®. Most of all, we hope you enjoy using it as much as we enjoyed building it.

OPERATION

This 4 way Multi-Channel Volume Pedal has been specially designed for gradual volume increases as the pedal is moved from off (toe up) to mid-travel (halfway between toe up and toe down). From mid-travel to full on (toe down) the volume increases faster. This audio taper combination gives you majestic volume swells - great for pedal steel effects - when using the full pedal travel (toe up or toe down) or subtle volume change with slight pedal movement. The pedal should be plugged into your signal chain directly after your instrument and before devices that add gain (such as preamps, distortion and overdrive effects). Plugging into the pedal after these type of effects may result in unwanted volume in the "off" position. **NOTE: How fast you move the pedal affects how the volume increases. The slower you move the pedal, the smoother the volume increases.**

CONNECTIONS

INPUTS (Channels 1- 4): Input jacks. Plug instrument into these jacks using 1/4" guitar cables.

OUTPUTS (Channels 1 - 4): Output jacks. Connect amplifier(s) to these jacks using 1/4" guitar cables.

POWER

The XVO-4 is a passive pedal. That means that no power is required for the pedal to function.
